Hassan Alti

Full Stack Developer skilled in Node.js, React.js, TypeScript, and Next.js, with theoretical Java and containerized (Docker) backend exposure. Expertise in scalable applications, API development, automated testing, AI solutions, and databases like MongoDB and PostgreSQL, with a strong ability to adapt to client needs across industries.

Skills

- **Programming Languages**: Java, JavaScript, TypeScript, SQL
- **Frontend**: React, Next.js, Tailwind CSS, Shadcn
- **Mobile**: React Native, Expo
- **Backend**: Node.js, NestJS, Express
- **Testing & DevOps**: Jest, Cypress, Unit/Integration/E2E Testing, Docker, Kubernetes
- **Languages**: English (Fluent), French (Fluent)
- **Databases**: PostgreSQL, MongoDB, Redis, MySQL

Work Experience

FULL STACK DEVELOPER | Elephants Ride 02/2025 – Present

- Built Rihlatech, a B2B travel booking platform for GCC companies - aggregates hotel and flight data from multiple API vendors and normalizes it all into one search.
- Stack is TypeScript, Next.js, React with TanStack for state management, and PostgreSQL on the backend.
- Reduced hotel search time from 20-30 seconds to 3-7 seconds with real-time indexing, mapping layers, and parallel vendor calls.
- Set up an AI itinerary agent (LangChain) that searches the web for travel plans and answers user questions, backed by scrapers and cron jobs keeping data fresh.
- Translated Figma designs into responsive interfaces and joined planning meetings to keep technical work aligned with what the business actually needed.
- Mentored 2 junior developers daily - quick debugging help, system design discussions, and hands-on support to get their tasks shipped faster.

FULL STACK DEVELOPER | FREELANCE 10/2022 - 08/2024

- Delivered 16+ client projects, maintaining a 5/5 rating and 100% client satisfaction. View Testimonials
- Developed an automated product article generation app with web scraping, markdown exports, and an admin dashboard, saving 30+ hours per month of manual labor for an e-commerce company as measured by pre/post workflow audits.
- Engineered 2 AI-driven SaaS applications with scalable backend architectures using NestJS, MongoDB,

Redis, and modern frontends with React.js, Next.js, and Tailwind CSS, complementing coursework in Java and object-oriented backend design from the Engineering Degree program.

- Increased customer response rates by 80% for a UK-based restaurant/pub by building an AI-powered review response tool integrating TripAdvisor and Google Reviews with Puppeteer.

Projects

Influencer Marketing Platform

An influencer marketing platform designed to help brands discover, analyze, and track campaigns with over 350 million influencers across TikTok, Instagram, and YouTube.

BloomSkin App (React Native + Node.js)

Built for bloomskin.pl as a comprehensive skincare tutorial management platform, BloomSkin helps users manage their skincare routines, explore treatments, and shop for products all within an intuitive mobile experience. Project Link

Education

BACHELOR OF COMPUTER SCIENCE (BCOMPSC) **09/2021 - 08/2024**
Conservatoire National des Arts et Métiers (Le CNAM)

ENGINEERING DEGREE IN COMPUTER SCIENCE **09/2024 – 03/2027**
Conservatoire National des Arts et Métiers (Le CNAM)

· Specialization: Architecture and Engineering of Systems and Software
